<b>First Question</b>	<b>No. of Branches (2)</b>	<b>(10/40)</b>
-----------------------	----------------------------	----------------

---

<b>Q1 B1</b>	<b>(5/10)</b>
--------------	---------------

**Design an EER diagram for a hospital.**

We want to keep track of patient information.

- For each patient, we want to keep track of patient ID, her or his name, admission date.
- There are two kinds of patient, outpatient and resident patient.
  - For outpatient, we want to know the check back date, while for resident patient we want to keep records about discharge date.
- A patient cannot be outpatient and resident patient at the same time.
- Each resident patient will be assigned with a bed.
- A bed has a bed ID.
- Each patient is treated by a responsible physician.
- A physician may provide one or several treatments for a patient.
- For each treatment, we want to know the treatment ID, treatment name and patient's reaction.
- A responsible physician can take care of many patients. For each responsible physician, we want to keep track of her or his name, phone number, physician ID.

**Q1 B2**

**(5/10)**

**Given the following XQuery, explain what should it return. Rewrite it using SQL.**

```

for  $x in /bank-2/account
let  $acctno := $x/@account_number
where $x/balance > 400
return <account_number> { $acctno } </account_number>

```

<b>Second Question</b>	<b>No. of Branches (1)</b>	<b>(5/40)</b>
------------------------	----------------------------	---------------

**Q2 B1 Define the following:**

**(5/5)**

**1. XSLT**

.....

.....

**2. DTD**

.....

.....

**3. DDL**

.....

.....

**4. MTF**

.....

.....

**5.RAID**

---	--	--

<b>Fourth Question</b>	<b>No. of Branches (2)</b>	<b>(10/40)</b>
------------------------	----------------------------	----------------

**Given the following Instance of the two tables person and orders.**

**The "Persons" table:**

Id	LastName	FirstName
1	Hansen	Ola
2	Svendson	Tove
3	Pettersen	Kari

**The "Orders" table:**

O_Id	OrderNo	P_Id
1	77895	3
2	44678	3
3	22456	1
4	24562	1
5	34764	15

**Show the results of each of the following Queries**

```
1) SELECT Persons.LastName, Persons.FirstName, Orders.OrderNo
FROM Persons
RIGHT OUTER JOIN Orders
ON Persons.P_Id=Orders.P_Id
```

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

```
2) SELECT Persons.LastName, Persons.FirstName, Orders.OrderNo
FROM Persons
FULL JOIN Orders
ON Persons.P_Id=Orders.P_Id
```

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

**End of Questions**

**Good Luck**
